

# NAPA Fleet Intelligence

Operational Efficiency Insight for Any Vessel in the World

[www.napa.fi](http://www.napa.fi)

**NAPA Fleet Intelligence** is a cloud-based web service for fleet operational insight. It provides charterers, operators and shipowners with simple, transparent and accurate efficiency data for any ship in the world, with zero onboard equipment installation and zero disruption to operations.

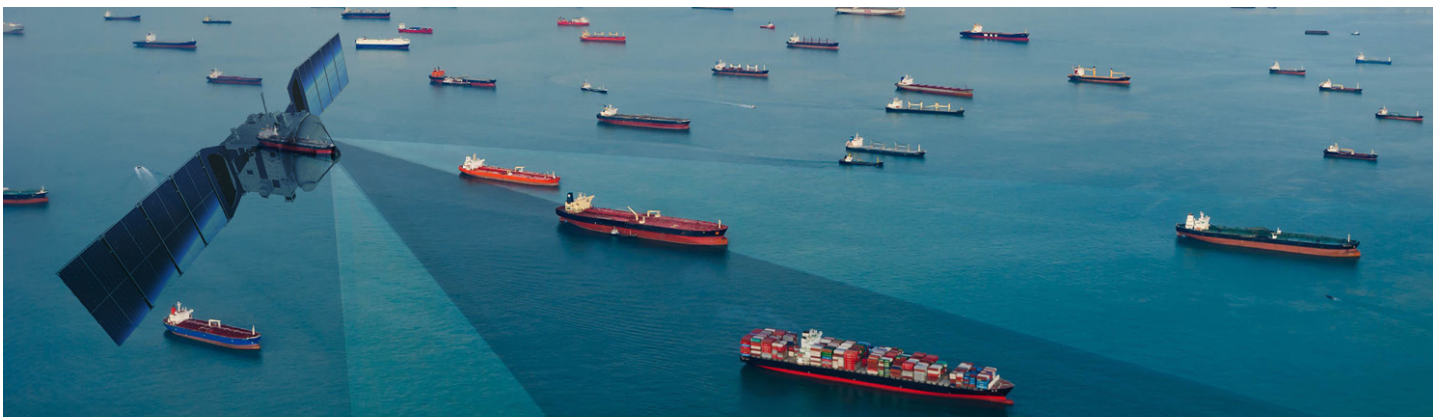

NAPA Fleet Intelligence offers voyage-by-voyage analysis of fuel efficiency for any conventionally powered vessel including tankers, bulkers and containers. Performance monitoring dating back to January 2015 for 55,000+ vessels and 6.5 million voyages has been analyzed, and over 10,000 new voyages are added to the service every day.

NAPA Fleet Intelligence collects, combines and analyzes data from various sources; AIS data, weather and environmental monitoring, and hydrodynamic calculations from NAPA's in-house experts, guaranteeing maximum accuracy.

The reports are standardized, readily analyzed and easy to understand, covering owned, time chartered and voyage chartered vessels. The service helps to identify fleets and vessels which operate inefficiently and call for further analysis. NAPA Fleet Intelligence can also be used for verification of noon reports.

With instant access through a web portal, the service requires no onboard equipment or installations.

NAPA Fleet Intelligence can be upgraded to advanced performance analysis and voyage optimization solutions provided by NAPA.

Advanced algorithms and hydrodynamic calculations

Chart data

Weather & environmental monitoring

AIS Data

## For Charterers

- Offers transparency and comparable efficiency data in a single format for all of their chartered vessels, regardless of length of charter or the data collection methods in place
- Provides reliable and verified ship performance information before signing a chartering deal, revealing how efficiently the ship has been operating
- No installation costs, can be applied to the whole fleet immediately
- Allows instant analysis of completed voyages, provides information for planning of upcoming voyages
- Verification of noon reports
- Transparent tool for communication with Operators

## For Operators

- Provides ship and fleet performance reports with analysis of operational efficiency
- Benchmarking ships within the fleet, identifying the low-hanging fruit for efficiency saving
- Finds best and worst operated routes and vessels in your fleet
- Allows effective planning for future voyages based on learnings from previous ones
- Transparent tool for communication with charterers
